Summary

An aspiring junior Front-End Developer with a heart of developing responsive and user-friendly interfaces. Solid experience in HTML, CSS, and JavaScript, complemented by an understanding of modern frameworks like React and Bootstrap. Proven track record of collaborating with cross-functional teams to deliver seamless web applications. With these skills, I am seeking a job position to put my skills into practice and contribute to the growth of your company.

Projects and Practical Experience

Group Project | www.kejaprime.vercel.app

- Collaborated with a team of three (two front-end, one back-end developer) to build a responsive rental listing platform.
- Contributed to the UI design and implementation using HTML, CSS, Bootstrap, and React.

- Assisted in integrating front-end with back-end APIs to enable user login and house search features.
- Gained hands-on experience in teamwork, version control (GitHub), and real-world problem solving.

Front-End Developer – Shop-Mtaani Website

Individual project available at <https://shop-mtaani-742u.vercel.app/>

- Built using React, Bootstrap, JS, and CSS.
- I developed this project out of intuition, after searching for certain products in my area of residence and failing to locate them on time. I initially started it as a website to help local vegetable sellers to do deliveries for their products, but along the way, I decided to include other interested sellers.
- Basically, a buyer can locate sellers online in their local areas, e.g. Umoja estate within Nairobi and the sellers can showcase their products and make deliveries.
- The project enables easy access to products, promoting local commerce and convenience.

Front-End Developer – She Codes Website

Individual Project | [View Live](#)

- Designed and developed a website promoting She Codes, an initiative to empower women with coding skills.
- Built using HTML, Bootstrap, and JavaScript, ensuring a clean and responsive layout.
- Showcased ability to manage a project independently from concept to deployment.
- Deployed via GitHub Pages.

Front-End Developer – React To-Do List App

Solo Project | <https://eshihanda.github.io/my-react-app/>

- Built a fully functional to-do list application using React and JSX for component-based UI design.
- Implemented features such as task creation, deletion, and completion toggles.
- Emphasized a minimalist and responsive design for usability across devices.
- Deployed using GitHub Pages, showcasing hands-on experience with React and front-end state management.

Portfolio

Live Projects:

- [KejaPrime](#) – Rental listing web app built as part of a 3-person team.
- <https://shop-mtaani-742u.vercel.app/>
- [She Codes Website](#) – A solo project promoting coding for women.
- [To-do list application](#) – An individual project I developed for my everyday tasks
